-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 2,792,650 to Kenyon.

The Kenyon '650 patent discloses an implement pitch-yaw system comprising a support structure (10), an implement structure (52) pivotally attached to the support structure, a connecting member (46) slidably attached to the support structure, first (48) and second (50) yaw actuators attached between the implement structure and the connecting member, and a pitch actuator (138) attached between the connecting member and the support structure. The vehicle inherently includes a control unit (e.g., hydraulic valves) for controlling the actuators.

Regarding claims 2-7, 9-14: The support structure (10) is attachable to a vehicle, has an elongate structure, and a cavity (see Fig. 1 – holes in bracket 140) for receiving the pitch actuator. A slide structure (46f) is slidably positioned about the support structure, and the connecting member (46) is attached to the slide structure. The connecting member can be considered to be winged (see Fig. 2), with the first and second yaw actuators attached at opposite portions of the connecting member. The connecting member is centered along a longitudinal axis of the support member (See Fig. 2).

Regarding claims 15-20: The method, as claimed, would be inherent, since it is the normal and logical manner in which one of ordinary skill in the art would utilize the Kenyon '650 structure.

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
